Leonardo Reiners

Fullstack Software Engineer | React | Node | Vue.js | Python | Git |
Docker | SQL | Jest | Pytest
Sinop, Mato Grosso, Brazil

Summary

Since I had my first class about algorithms always knew that I wanted to work with tech, but I wasn't ever sure how to go about it. I started joining a new college focusing on System Development and dropping my Construction Engineer Major, I created a ton of projects for classes, websites, image recognition artificial intelligence and others. These experiences led to me getting an opportunity with a company that was led by a professor.

There I had the chance to grow exponentially on being a Front-end Developer, creating apps from scratch, helping on bugs, participating in large projects and contributing to their delivery. After that, I started chasing for a bigger remote job, with room to grow even more, joined an academy that helped me get the biggest opportunity of my career, working on a multinational joining a team that was responsible for recreating an old system of the company, having a big role in the recreation of the whole front-end, adapting and creating functions that was used by hundreds of workers.

Outside of work, I serve on multiple church projects on my city, that have focus on helping young people and family in need.

I enjoy traveling, sports(almost all of them) and tech in general!

If you ever want to bounce ideas off of me, please feel free to reach me out on chat or contact me on my email leoreiners.dev@gmail.com!

Skills:

- Javascript
- CSS
- HTML
- Vue.JS
- React
- Node
- MySQL
- Jest
- Pytest
- Great at solving troubles and bugs
- Love pair coding where I can help/teach the team and be useful
- Knowledge of modern development tools, like Git and Docker
- Experience in consuming RESTful APIs
- Ruby on rails (RSpec and API)
- Python (Flask and AI)
- Strong collaboration and communication skills

Experience

AjaxTI

Fullstack Software Engineer

October 2021 - February 2023 (1 year 5 months)

Remoto

I started the contract with full focus on a refactoring of an old project, recreating the front in Vue.js. Eventually, with the project's needs, I started to assume backend responsibilities as well, creating new endpoints to be consumed and API adjustments to adapt to the new front, all in python with Flask. And with that, also assuming responsibility with the project's SQL database, creating scripts to adapt and maintain it.

I had as responsibilities:

- . Maintenance of legacy systems made in Python.
- . Creation of new interfaces using JavaScript and React/VueJs with Quasar.
- . Creating APIs using Python and NodeJs with TypeScript.
- . Creation of unit and integration tests using pytest.
- . Lead the Front-end of a team of 3 interns.

Diletta Solutions

Mobile Developer

July 2021 - October 2021 (4 months)

3 months focused on learning flutter and using different APIs with firebase and Insomnia, and also developing apps for learning demonstration.

I had as responsibilities:

- . Creating apps using Flutter.
- . Development of REST APIs using Nodejs.
- . Fintech Mobile App, built the Front-end and API requests from back-end, recreating a modern and fast design entirely from Figma
- . Creating/using app designs with Figma.

MBR Tech

Front-end Software Engineer

June 2019 - July 2021 (2 years 2 months)

Sinop, Mato Grosso, Brazil

Participation in several projects of the company, from bug fixing, to creating web applications and Restful APIs interactions. Projects carried out in HTML, CSS and JavaScript, using Node/Python and React/Vue.js framework.

I had as responsibilities:

- . Develop websites/systems for companies in the region.
- . Build application interfaces using JavaScript and ReactJS/ Vue.js.
- . Develop a website for Sebrae-MT and create a map of startups in the state using the Google API by creating a custom Pin with company logos using Canvas JS.
- . Being the main Front-end of the project to create a digital bank for an insurance company in Minas Gerais
